

The French Association of Palynologists (l'APLF) honoured Dr. Linda Heusser last September for her major contributions to the Marine Palynology. Linda has worked for many years in the Lamont Doherty Laboratory (New York, USA) being the pioneer of this discipline. She has produced seminal papers on the calibration of marine pollen signals, and vegetation and climate reconstruction of different regions in the world, such as Chile and the eastern of United States. These works have been published in mainstream scientific journals.

This homage was held in Bordeaux in the framework of the Workshop on Biomisation organized by the Laboratoire Paléoclimatologie et Paléoenvironnements Marins (EPHE, UMR-CNRS 5805, Bordeaux University) between 27th and 30th September 2010. This workshop was funded by QUEST-DESIRE (NERC-INSU), the International Focus Group ACER "Abrupt Climatic changes and Environmental Responses" of INQUA.
